

## Improved Bracket Band Saw.

THIS Machine is built to meet the requirements of those who may not need the larger kind of Band Saw. The Frame is a neat, cored casting and is intended to be securely fastened to a post in any suitable part of the building where machine is to be used.

A steady and proper tension is kept on the Saw by a weighted lever not effected by the screw. It is fitted with Guides for the back of the saw and also adjustable lateral guides for the sides, both above and below the table.

The Driving Shafts are adjustable so that the saw may be kept in the centre of the wheels while at work. The Table is of iron and is planed perfectly true.

Each Machine is supplied with one Perrin's saw and apparatus for welding saws, and a piece of silver solder.

Wheels, 30 in. dia. Fast and Loose Pulleys, 14 in. dia.;  $4\frac{1}{2}$  in. face, and should make 400 revs. per minute.
